Indian Cottons, Global Reach

We see tremendous potential to leverage its Cotton Textile Export Potential through strategies in export-market development, to aid the textile and apparel exporters for their outstanding performance during April 2020-21. The Indian textile industry has a wide range of fabrics and a large number of cotton, jute, and woolen textiles. The Ministry has always been supportive of the exporters and has taken several initiatives to help them.

The Ministry has always been supportive of the exporters and has been making concerted efforts to improve India’s competitive position in the textile and apparel export market. The Indian textile industry has a wide range of fabrics and a large number of cotton, jute, and woolen textiles. The Ministry has always been supportive of the exporters and has taken several initiatives to help them.

Opportunities during Pandemic

The COVID-19 pandemic has affected the global textile industry, and India is no exception. However, the Indian textile industry has shown resilience in the face of this global crisis. The industry has continued to operate throughout the pandemic, and the government has been supportive of the industry with various measures to help it recover.

The textiles and apparel industry has seen a huge slump in consumption as well as subsequent demand. Major retail stores in the US and EU have filed for bankruptcy and closed their operations. This has led to a significant reduction in the demand for textile and apparel products.

However, the industry has shown resilience in the face of this global crisis. The government has been supportive of the industry with various measures to help it recover.

Conclusion

The textiles and apparel industry has seen a huge slump in consumption as well as subsequent demand. Major retail stores in the US and EU have filed for bankruptcy and closed their operations. This has led to a significant reduction in the demand for textile and apparel products. However, the industry has shown resilience in the face of this global crisis. The government has been supportive of the industry with various measures to help it recover.

We encourage all our partners and stakeholders to continue working together to ensure the sustainability of the industry and to help it recover from this global crisis.

Thank you for your support and cooperation.

Sustainability: Ensuring Prosperity for People, Populace and the Planet

Dr. Siddhartha Ruparel, Executive Director, TEXPROCIL

As the world makes progress through the uncertainties of the COVID-19 pandemic and globalisation, nature reserves the quality of our fairness in certain fourteen, green energy conservation of waste, diverse use of biomass and material in the real world through consistency, structures and management and stakeholders realize the potential of sustainability practices in ensuring higher use on resources.

Pathways to Sustainability

The pathway to sustainability is paved with many initiatives. For instance, many retailers have been suggested to initiate Sustainable Supply Chain Practices. Cotton makes up 80-90% of the world’s textile fibre production, making it the most widely used plant fibre in the world. The circular economy has been evolving as a vital solution to reduce the environmental footprint of the textile industry. The global cotton sector has been under considerable pressure to reduce its carbon footprint and improve its sustainability credentials. The industry is also increasingly focusing on circularity and recycling as a means of reducing water usage and waste generation.

Ensuring social compliance in the textile industry is another area of concern. Over the years, we have seen a decline in the working conditions in global supply chains. This has been attributed to factors such as longer working hours, poor working conditions, and low wages. Ensuring that these workers are treated fairly and paid a living wage is crucial to the sustainability of the industry.

Ensuring environmental compliance is also a priority. The textile industry is one of the largest polluters in the world, contributing significantly to air, water, and soil pollution. Sustainable practices such as using renewable energy sources, reducing water usage, and minimizing waste generation are essential to ensure the environmental sustainability of the industry.

The path to sustainability in the textile industry is paved with many initiatives. For instance, many retailers have been suggested to initiate Sustainable Supply Chain Practices. Cotton makes up 80-90% of the world’s textile fibre production, making it the most widely used plant fibre in the world. The circular economy has been evolving as a vital solution to reduce the environmental footprint of the textile industry. The global cotton sector has been under considerable pressure to reduce its carbon footprint and improve its sustainability credentials. The industry is also increasingly focusing on circularity and recycling as a means of reducing water usage and waste generation.

In the textile sector, sustainability and corporate social responsibility (CSR) are now inextricably linked, with businesses increasingly focusing on not only producing eco-friendly products but also ensuring that the production process itself is sustainable. This includes reducing waste, conserving resources, and minimizing the impact on the environment.

Sustainable Textile Manufacturing encompasses not only the end products but also the entire chain of production. The concepts/codes created for conventional textile manufacturing processes and its supply chain system have catered various aspects concerning the consumers.

Enabling two billion people worldwide to enjoy the benefits of sustainable textiles, TEXPROCIL has been actively pursuing a number of initiatives to promote sustainable textile manufacturing in India. The company has successfully helped many Indian textile manufacturers to achieve sustainability goals.

The TEXPROCIL Awards recognise and promote the efforts of Indian textile manufacturers in achieving sustainability goals. The awards recognise companies that have demonstrated a commitment to sustainability through their practices and products.
